## PHOBOS Highlights

- $d+A u \& p+p$ physics
- Multiplicity
- Inclusive Spectra
- PID
- Multiparticle Physics in Au+Au

## PHOBOS 2003

Several crucial upgrades for d+Au
Check out our student posters!

## Charged-Particle Multiplicities in $\mathrm{p}+\mathrm{p} \& \mathrm{~d}+\mathrm{Au}$

## Minimum-bias d+Au

See R. Nouicer's talk

## Minimum-bias d+Au

See R. Nouicer's talk

## Centrality Dependence of $\mathrm{d}+\mathrm{Au}$

| Centrality <br> $(\%)$ | $N_{\text {part }}$ | $N_{\text {part }}(\mathrm{Au})$ | $N_{\text {part }}(\mathrm{d})$ |
| :---: | ---: | ---: | ---: |
| $0-20$ | 15.5 | 13.5 | 2.0 |
| $20-40$ | 10.8 | 8.9 | 1.9 |
| $40-60$ | 7.2 | 5.4 | 1.7 |
| $60-80$ | 4.2 | 2.9 | 1.4 |
| $80-100$ | 2.7 | 1.6 | 1.1 |

## Participant Scaling?

Multiplicity extrapolated to $4 \pi$

Relative to p+p multiplicity at same energy, scales with $\mathrm{N}_{\text {part }} / 2$

No modification with

- Beam energy
- Nuclear thickness
- 200 GeV dAu vs centrality
- 200 GeV dAu Min-Bias
§ 200 GeV pp inelastic
PHOBOS
Preliminary

$\triangle 9.69 \mathrm{GeV} \mathrm{pPb}$

## Is $\mathbf{N}_{\text {part }}$ Fundamental?

Expectations:
"stopping" in d direction
"cascading" in Au direction
Why do they add up to
$\mathrm{N}_{\text {part }}$ scaling so robustly?
Same effect in Au+Au
"Long-range" correlation?

## (p)d+Au in Different Frames

As with AutAu, "limiting fragmentation region" grows with energy. Shape appears to be constrained by lower-energy p+A data. Surprising over 1.5 orders of magnitude in collision energy.

## Can we build $\mathrm{Au}+\mathrm{Au}$ with $\mathrm{p}+\mathrm{p} / \mathrm{d}+\mathrm{Au}$ ?

## Can we build $A u+A u$ with $p+p / d+A u$ ?

## Can we build $\mathrm{Au}+\mathrm{Au}$ with $\mathrm{p}+\mathrm{p} / \mathrm{d}+\mathrm{Au}$ ?

## Can we build $\mathrm{Au}+\mathrm{Au}$ with $\mathrm{p}+\mathrm{p} / \mathrm{d}+\mathrm{Au}$ ?

## Can we build $\mathrm{Au}+\mathrm{Au}$ with $\mathrm{p}+\mathrm{p} / \mathrm{d}+\mathrm{Au}$ ?

## Can we build $\mathrm{Au}+\mathrm{Au}$ with $\mathrm{p}+\mathrm{p} / \mathrm{d}+\mathrm{Au}$ ?

## Can we build $\mathrm{Au}+\mathrm{Au}$ with $\mathrm{p}+\mathrm{p} / \mathrm{d}+\mathrm{Au}$ ?

## Multiparticle Physics: Fluctuations, HBT, Flow

## Forward Multiparticle Physics in Au+Au

$4 \pi$ multiplicity measurements show long-range correlation

- Fluctuations \& Correlations Long-Range
- HBT Correlations
- Azimuthal asymmetries
vS.
Short-Range effects

## Forward-Backward Correlations

PHOBOS study for AutAu:

$$
\begin{gathered}
C=\frac{F-B}{\sqrt{F+B}} \Rightarrow \sigma(C)=\sqrt{\kappa} \\
\text { K. Wozniak talk }
\end{gathered}
$$

- Correlations consistent w/UA5 Weak rapidity dependence from $1<|\eta|<3$

UA5 $\bar{p}+p: 2-p a r t i c l e ~ c l u s t e r s ~ e x p l a i n ~$

- Short-range correlations in $\eta$
- FB correlations

## Directed and Elliptic Flow

## Elliptic Flow vs. Centrality

$$
v_{2}^{\text {central }}(\eta) \propto v_{2}^{\text {peripheral }}(\eta)
$$

Overall shape simple, but still unexplained

## Elliptic Flow vs. Centrality

$$
v_{2}^{\text {central }}(\eta) \propto v_{2}^{\text {peripheral }}(\eta)
$$

Overall shape simple, but still unexplained

## Directed Flow vs. Energy

Dramatic change of directed flow near $\eta=0$

## Directed Flow vs. Energy

Dramatic change of directed flow near $\eta=0$

## "Limiting Fragmentation" of $\mathrm{v}_{1}$

Similar directed flow relative to beam rapidity

## "Limiting Fragmentation" of $\mathrm{v}_{1}$

PRL91 (2003), Poster by B. Back

Similar directed flow relative to beam rapidity

## Connection with Net Baryons?

BRAHMS, nucl-ex/0312023

Peak of baryon density at AGS/SPS at $\eta^{\prime} \sim-1.5$ (Busza \& Goldhaber '84)

## Directed \& Elliptic Flow

## Directed \& Elliptic Flow

## Identified Particles in $\mathrm{d}+\mathrm{Au}$

## Ratios with dE/dx PID

A "classic" PHOBOS measurement: Two charge signs, two bending directions...

...but now we have

$$
\begin{array}{cc}
p+p & 0 \\
d+A u & 8 \\
A u+A u \quad 888
\end{array}
$$

## Identified Particle Ratios

d+Au: nucl-ex/0309013
Au+Au: PRC-R67 (2003)

Number of Collisions $\langle v\rangle$
$p+p \rightarrow d+A u: N o$ modification (cf. multiplicity)
Au+Au: Additional net-baryons near $\eta=0$

## Identified Particle Ratios

d+Au: nucl-ex/0309013
AutAu: PRC-R67 (2003)

Number of Collisions $\langle v\rangle$
$p+p \rightarrow d+A u:$ No modification (cf. multiplicity)
Au +Au: Additional net-baryons near $\eta=0$

## Identified Particle Ratios

d+Au: nucl-ex/0309013
Au+Au: PRC-R67 (2003)

Number of Collisions $\langle v\rangle$
$p+p \rightarrow d+A u: N o$ modification (cf. multiplicity)
Au +Au: Additional net-baryons near $\eta=0$

## PHOBOS TOF PID

## Particle Ratios at High- $\mathrm{p}_{\mathrm{T}}$

Main difference between $p$ and $\bar{p}$ is overall yield. Spectral shape only slightly modified vs. $\mathrm{p}_{\mathrm{T}}$

## Particle Ratios at High- $\mathrm{p}_{\mathrm{T}}$

Main difference between $p$ and $\bar{p}$ is overall yield. Spectral shape only slightly modified vs. $\mathrm{p}_{\mathrm{T}}$

## TOF PID Spectra d+Au

## $\mathrm{m}_{\mathrm{T}}$ Scaling in $\mathrm{d}+\mathrm{Au}$ and $\mathrm{Au}+\mathrm{Au}$

## $\mathrm{m}_{\mathrm{T}}$ Scaling in $\mathrm{d}+\mathrm{Au}$ and $\mathrm{Au}+\mathrm{Au}$

## $\mathrm{m}_{\mathrm{T}}$ Scaling in $\mathrm{d}+\mathrm{Au}$ and $\mathrm{Au}+\mathrm{Au}$

## d+Au Inclusive Spectra vs. $\eta$

## Inclusive Charged Hadrons in d+Au

PRL91, 072302 (2003)
$A u+A u$ and $d+A u$ scale differently relative to $\mathrm{N}_{\text {coll }}$

$$
R_{d+A u}=\frac{1}{N_{\text {coll }}} \frac{d N^{d+A u} / d p_{T}}{d N^{p+p} / d p_{T}}
$$

## Inclusive Charged Hadrons in d+Au

PRL91, 072302 (2003)
$A u+A u$ and $d+A u$ scale differently relative to $\mathrm{N}_{\text {coll }}$

$$
R_{d+A u}=\frac{1}{N_{\text {coll }}} \frac{d N^{d+A u} / d p_{T}}{d N^{p+p} / d p_{T}}
$$

PHOBOS has a "forward" acceptance (\& more in the future!)

## Spectra in $d+A u$ for $\eta>0$

Systematic decrease in $R_{d+A u}$ with increasing $\eta$ Saturation of ratio also occurs at a lower $p_{T}$

## $\eta$-Dependence of $\mathbf{R}_{d+A u}$

Monotonic evolution from mid-rapidity to forward rapidities. BRAHMS data is a continuation of trends starting at $\eta=0$

## The Landscape of Particle Production

- $N_{\text {part }}$ Scaling \& limiting fragmentation
- Long range correlations in $\eta$ ?
- Forward Multiparticle Physics in Au+Au
- FB \& HBT show effects local in $\eta$ for $|\eta|<3$
- First measurement of directed flow vs. $\eta$ \& $\sqrt{ }$
- Identified Particle Spectra in d+Au
- PID Spectra in d+Au, Au+Au for Run-4
- Proton and antiproton spectra similar
- Inclusive d+Au Charged Spectra vs. $\eta$
- Strong $\eta$ dependence interpolates between $\eta=0$ and forward $\eta$

## Backup Slides

## Relative Yields vs. $\mathrm{p}_{\mathrm{T}}$

## $\mathrm{m}_{\mathrm{T}}$ Scaling and Strangeness

Factor of 2 brings K's into line ( $\gamma_{\mathrm{s}} \sim 0.5$ in pp)

## PHOBOS Coverage $d \mathrm{~N} / \mathrm{d} \eta$

## Principal Axes

Heavy-ion collisions dominated by $\mathrm{N}_{\text {part }}$ fluctuations

Decouple total from relative fluctuations

$$
C=\frac{P-N}{\sqrt{P+N}}
$$

Independently partitioned between P \& N

$$
\sigma(C)=1
$$

(flipping a coin, random walk...)

## Forward-Backward Correlations

## Simple Exercise

Let's play a game:

Shift PYTHIA dN/dy by $\Delta y=1$

Scale up by $\mathrm{N}_{\text {part }} / 2$
Recalculate $\mathrm{dN} / \mathrm{d} \eta$

> Similar shapes
> (violates energy
> conservation (\%)

## Participant Scaling

## Wounded Nucleon "Scaling" <br> $$
\begin{gathered} \frac{1}{2} N_{p a r t} \times N_{e+e-} \\ \neq \\ \frac{1}{2} N_{p a r t} \times N_{p p} \end{gathered}
$$

Transition to $\mathrm{d}+\mathrm{Au}$
$\mathbf{N}_{\text {part }}$
